IDROKAL LIMESCALE REMOVER

Limescale is a problem generated by hard water, it doesn't care how many times you clean your house or service your boiler it will continue to cause you problems such as scale in kettles, shower heads, washing machines, dishwashers, irons etc., inefficient and wasteful central heating, skin irritation and dull hair, limescale staining on bathroom suites, tiles and kitchen ware poor lathering of soaps and shampoos and time wasted in descaling and additional cleaning, until you decide to do something about it.

HOW IT WORKS

Using low frequency radio waves IDROKAL generates induction energy which alters the characteristics of the hardness salts. Instead of forming hard limescale the mineral salts stay in solution and existing scale goes into suspension and is gradually removed from the system, leaving a scale free home. The limescale eliminator can be fitted onto all pipe materials such as Copper and Plastic.

SPECIFICATION

Hermetically sealed in high impact enclosure.

Advanced computerised electronics.

Compliance with EMC regulations.

DIMENSIONS 117 x 97 x 44mm.

Manufactured to CE standards.

Conforms to BS3535
